

I'm not robot!

light box. If you want to do this alone, you can use wood, cardboard or any other materia look and add a support or suspension ring. Now, following the sequence of the layers, from the front back, one by one,a paper inside and add a support frame in it. the support frame is 5mm thick, then a light box with 10 layers will have a space of 5cm in depth. you can see that the edge of the paper is fully covered by the support frame, thus all the faults are hidden. when the last paper is installed, attach the led strip to the rear panel with a tape. align the led track in a single line. up down lines, u in a circle. the way to align the lights is mainly depending on the design layouts. know where to let the lights pass and where to let the lights spread, play with the different lighting ability until the best result emerges. Make a small hole at the bottom of the rear panel to let the led wire pass. Close the panel. Turn on the switch. and it's done! It's very easy, isn't it? now it's time to take advantage of my original craft. with the remote control, I can set a breathing mode for the light box. looking at the endless tie of the sun rise to the sun shine and sunset with the golden lights scattered on the greenish earth, my heart is full of peace at the moment. The paper cutting light box is like a diorama of the sacred gate inside under the sky. she opens a new world, full of beauty and history for everyone! Everybody!
