### Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with casio 1500t-7v manual . To get started finding casio 1500t-7v manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

### casio 1500t-7v manual

View and Download Casio Pathfinder PAW1500 operation manual online. Casio Pathfinder PAW1500 User Guide. Shop Casio PRO TREK Unisex Watch PRW15001VER.Reload to refresh your session. Reload to refresh your session. I was extremely involved with the features that each watch had aside from it telling the time. Features such as the calendar, timer, alarm, and chronograph kept me comfortable in the knowledge that I had these tools at my disposal if I needed them. I then started getting watches with such amazing for me at the time functions like a calculator, thermometer, or a world timer. I liked to mix and match the models to find the one that had the most features I wanted. Those with the most features always seemed to be a bit more than my dad wanted to spend which was fine as there is only so much that a kid needs I needed something to look forward to right. The last fulltime Casio watch I had was in high school, and was a Casio GShock. So for a huge chunk of my life, I was a dedicated Casio watch lover. I finally got that dream Casio watch I always wanted, and I have to admit it is damn satisfying. Of course there is a distinct element of "I've always wanted one of these," in my current joy, but at the same time there is a level of refinement in a watch like this that you don't even have in Swiss watches which related to the user experience with the functions More on that in a bit, lets go over what this beast is. This is Casio's newest and most feature rich Pathfinder series watch model PAW1500T7V. Its major claim to fame is its relatively thin size and complete list of features and functions. In fact, Casio watches are some of the best values around, period. Using my own language, I am going to write out a list of what I think best sums up the Casio Pathfinder PAW1500T I've never known of any other watch that has all these features together.<http://www.mybyblos.com/userfiles/bt5020-manual.xml>

- **casio prw-1500t-7ver manual, 1.0, casio prw-1500t-7ver manual.**

This watch is due for placement as another Casio Pathfinder watch is on the "watches fit for survival on deserted island list." Check out the link if you haven't already read one of my favorite articles that I wrote back when I first started the site. The main screen is very well designed, and is a result of Casio figuring out what to do best after years of trials. So many other watches like this push the time out of the way. The calendar functions sit above and below the time, with the moon phase being off to the left side. Other details on the face include information about daylight savings time DST, the state of the battery and whether the watch is in power savings mode. An easy to use backlight button is placed below the face, and an auto backlight can be turned on when tilt your wrist so you don't even need two hands. Which is an issue with the watch, but something you really can't get around. The basic features of this watch are easy to use, but to be an expert with all the functionality you'll need to delve into the manual. Casio, I have to give it to you, you have probably the best watch instruction manuals on the planet. Really, some other brands don't have manuals at all, or ones that are worthless. Not Casio. With them you get a well written, clear guide to operating your watch. Look at the picture of the watch sitting on the manual. Pretty thick the English language section is still about 120 pages, but purposeful. The sections on the LCD display are cleverly used for several purposes. For example, the area with the smaller pixels used to tell the date is also used as the graph for the barometric pressure. The dial and screen is interesting to look at closely. Along with all the detail, you really appreciate everything that the watch does. The outermost ring is a rotating bezel, which is mostly used for navigational purposes in combination with the compass. There are little micro clicks, but it moves pretty smoothly.<http://www.yokotobi.com.br/userfiles/bt300-manual.xml>

The bezel is a bit easy to move out of place and tricky recenter perfectly, but then again it adds a

level of precision to the functionality. If you don't know what I mean you will when you have the watch. The first part of the screen itself is the solar panel. You really wouldn't notice it unless you know what it was as it is covered with little indicators that are used as part of the various functions. This was Casio's clever way of not only hiding the solar panel, but also allowing for it to be placed on a watch with an LCD panel. Moving in more is a thin ring. In the default mode this helps you count the seconds in an analog manner, but also is used for such functions as the compass and others. On the main dial you see a small sectioned orb on the top left, that is the moon phase display, and at the lower part of the dial is the special graph for the tide chart. This is all I will go over, if I went on like this, talking about each screen, you'd probably stop reading. Just know that pushing the "MODE" button or one of the dedicated function buttons on the right of the watch cycles through the various screens. Lots to play with and keep you occupied all it needs now are games to play with. This goes along with the radio controlled part. These two features are very welcome and work particularly well in the PAW1500T. Casio has had year to improve and polish these functions, and it shows. The solar panel is charged by any light, not just the sun. The brighter the light, the faster it charges. At full charge the watch will last a long time, months really. Still, the watch is stingy with power, which is good. If the watch is out of light for long enough, it goes into power saving mode. This means the entire screen turns off, even though the watch is still technically on. It does this to save power. If you are wearing the watch and this happens, you just need to press a button to turn the screen back on.

Alternatively, the moment the watch is exposed to any light, it automatically turns back on this is really cool. As for the atomic clock aspect of the watch, things work equally well. It doesn't do so all the time as it would draw on the power too much. The watch has an antenna built in the top of the watch for this purpose. It will bore you to cover this more I am sure, but this is a well integrated function of the watch and results in making sure that the watch is always very accurate as it syncs with the atomic clock located in Fort Collins, CO, here in the states. While not a "thin" watch comparatively speaking, it does not feel too hefty and sits well on the wrist. Further, the titanium bracelet makes the watch quite light. Plus the bracelet is tapered so that it is not too thick all the way around an important feature. The triple locking deployment is easy to use and smooth. You'd think this Pathfinder watch weighed more given the size, but it does not. Yes, it does have its share of plastic, but none of the materials are cheap feeling. At about 50mm wide, the case is big though it wears smaller than it looks. The large flat case stays solidly on the top of your wrist and does not slide around I am happy to say. From a style standpoint this watch is all tech looking. Men will love the design. It is perfect for any activity, but I wouldn't wear it with a suit. Few watches I have feel so right on my wrist, even if they are more classy and feature more exotic materials and manufacturing. Perhaps is it a vestige of when I was a kid and am now just so happy to have the coolest watch around on my wrist. Or is it something else. Does Casio have some special watch making formula that just beats everyone else when it comes to immediate gratification and utility. I am not sure, but what I do know is that I won't be giving this watch away, and I am quite happy and comforted that Casio keeps making watches like these. Which brings me to a final point.

For that reason so much effort is put into basic user functionality and enjoyment, because the watch has to work for, and appeal to so many people. This is what I mean by a highly refined watch, and this is what you get with the Casio Pathfinder. It is a watch perfectly suited for telling you the time plus lots of other appreciate information in a reliably and most important enjoyable way. For all that, it gets my aBlogtoRead.com Seal of Approval Award. casio.com. Create one here. PRW1500T7VER PDF Manual,,,, Creators are allowed to post content they produce to the platform, so long as they comply with our policies. United Kingdom. Company number 10637289. Proto spolecne s dalsimiManual se takeTakto oznacene hodinky si s sebou rozhodne nebereme do vany ani do bazenu. Vodotesnost hodinek se bezne udava ve trech

ruznych jednotkach. V metrech m, barech bar nebo atmosferach atm. Vsechny tri jednotky oznacuji jednu velicinu a tou je tlak vodniho sloupce, který na hodinky pusobi. 1 metr vodniho sloupce odpovida tlaku 0,1 baru nebo 0,1 atmosféry. Když je tedy uveden na hodinkach údaj 100 m, 10 bar nebo 10 atm, vždy to znamena, ze hodinky v laboratornich podminkach vydrzi tlak vody, který je ve 100 metrech pri normou stanovene teplotě a hustotě vody. Casto vsak vzniká mylny predpoklad, ze tato hodnota zaroven znamena hloubku, do které se s hodinkami bez uhony muze potopit i majitel hodinek. Teoreticky tomu tak je, ovsem za predpokladu, ze se clovek potopi do ciste klidne vody bez hnutí a za stale teploty. Takova situace je vsak vice nez malo pravdepodobna, skutecna bezpecna hloubka v beznem zivote je daleko nizsi. Testy hodinek probihaji v laboratornich podminkach a tedy za idealnich predpokladu. Ty ale pri potapeni bezne nenastanou.

Namahani hodinek pod vodou zavisi take na tom, jak se s nimi pohybujete, zda s nimi do neceho neuderite. Pokud se potapite v mori, ohrozuje je agresivni slana voda a chemikalie. Automaticke elektricke podsviceni Pri nakloneni hodinek smerem k obliceji se automaticky zapne podsviceni displeje nebo ciferniku. Elektricke podsviceni Podsviceni displeje nebo ciferniku. Luminiscencni vrstva Fluorescencni povlak umoznuje po nasvetleni po dobu temer 6 hodin sledovat cas i za snizene viditelnosti nebo v uplne tme. Podsviceni LED diodou Pro podsviceni ciferniku nebo displeje je pouzita LED dioda. INDIGLO Pouze u hodinek Timex. Jedna se o celoplosne podsviceni displeje nebo ciferniku. Trigalight Prevratna technologie osvetleni rucicek a indexu hodinek TRASER. Jedna se o mikrokapsle naplnene radioaktivnim plynem neustale vyzarujicim svetlo bez nutnosti jakéhokoliv nasvecovani. Datumovka Zobrazuje aktualni datum pomoci cisla. Muze byt automaticka, jednomistna nebo dvoumistna a byva umistena v malem okenku na ciferniku. Den v tydnu Zobrazuje nazev dne v tydnu pomoci jeho cizojazyčne zkratky v malem okenku na ciferniku nebo pomoci rucicky a ciferniku s nazvy dni. Dualni cas Zobrazuje cas ve dvou, uzivatelem zvolenych, casovych pasmech. Hloubkomer Pomoci cidla tlaku je na displeji digitalnich hodinek zobrazovana hloubka ponoru pri potapeni. Kompas Vestaveny senzor ukazujici magneticky severni pol. Perpetual Calendar Predprogramovany kalendár na mechanicke bazi, rozlisuje delku mesicu a prestupne roky. Plne automaticky kalendár Funkce nekterych digitalnich a kombinovanych hodinek, u kterych je kalendár predprogramovan na nekolik desitek let dopredu. Svetovy cas Zobrazuje casy v ruznych casovych zonach sveta. Teplomer Vestavene cidlo pro snimani teploty. Pro presne mereni nesmi byt hodinky nasazeny na ruce. Vyskomer Vestavene cidlo tlaku s prepoctem na nadmorskou vysku.

Monitor srdecniho tepu Funkce sportovnich hodinek, kterou muzete sledovat vas aktualni tep reakci vaseho organismu na danou fyzickou zatez behem vykonavane sportovni aktivity. Radiove rizene Hodinky jsou schopny prijmout radiovy signal a tim se i same seridi. Treningove funkce Tyto hodinky umi daleko vice nez snimace srdecniho tepu. Po dosazeni nuly upozorni tonem. Nektere z hodinek maji i yachttimer, což je timer uzpusobený pro startovni odpocet regat. U digitalnich hodinek muze byt alarmu nekolik. Upominka Upozorneni tonem na zadany datum. Efektivny alarm Misto obvykleho zvukoveho signalu zni melodie, pripadne mohou hodinky i vibrovat. Hodinovy signal Vypinatelne zvukove oznameni kazde cele hodiny. Multi alarm Jednoduchy alarm opakujici se kazdych 24 hodin spolu s alarmem v pevne urcenu dobu cas, den, mesic. Snooze Funkce opakovaneho buzeni, pouze u digitalnich hodinek. Nikdy Vas nenecha zaspát. Digitalni Takto se oznacuji hodinky s digitalnim vystupem ukazatele casu cislice na displeji. Binarni Po secteni hodnot v binarnim kodu ziskame dany cas nebo datum. Binarni kod 1;2;4;8;16;32. Dvojkova soustava Binarni soustava je ciselna soustava mocnin cisla 2. Kombinovane Zobrazeni casu pomoci rucicek v kombinaci s digitalnim displejem. U automatickych strojku pruzinu svinuje pohyb ruky pri beznem noseni hodinek. Energii dodava strojku baterie. Citizen EcoDrive Jedinecny system pohonu ECODRIVE vyvinuty firmou CITIZEN v sobe spojuje nejvyssi ekonomické, ekologické a estetické naroky. Konec vymen baterii. ECODRIVE meni slunecni, nebo umele svetlo v cistou energii. Rozbeh jiz po jedne minute osvit, rezerva chodu az 500dni. Ekologicky a zaroven levny pohon, protoze pouziva zakladni prirodni zdroj svetlo. Ekologicky, protoze nezatezuje prirodu odpady z vypotrebovanych baterii a levny, protoze nemusite

platit za výměny baterií. Fossil Twist Jedna se o kombinovaný strojek s přesností Quartzového a estetikou automatu.

Vterinová rucicka je pohánena automatem, ostatní rucicky strojkem Quartzovým. Seiko kinetic System automaticky vytváří potřebnou energii využitím pohybu lidské ruky. Pohyb paze uživatele hodinek vytváří vibrace, které jsou přeneseny do generatoru. Část vyprodukované energie je využita k pohonu strojku, část je uchovávána v integrovaném kondenzátoru. Takovéto uspořádání zaručuje, že se hodinky nezastaví, ani pokud je majitel na několik dní odloží. V případě, že je klidové období delší, zastavuje se pohyb rucicek, ale uchovávána energie je dostatečná k obnovení chodu hodinek pouhými několika pohyby. Natahování Strojek pohání natažená pružina svým postupným rozbíjením. Natahování přes korunku se pružina svinuje. Bezpečné hodinky vydrží jeden až dva dny, ty nejvyšší kvality až dva týdny. Quartz solární napájení Solární panely zabudované pod ciferníkem doplňují energii pro zasazený vysokokapacitní kondenzátor. Karbon Jinými slovy uhlík, velice lehký, pevný a nehorlavý prvek, používaný většinou pro výrobu sportovních a armádních hodinek. Keramika Velmi atraktivní a tvrdý materiál, jedná se o takzvaný HighTech materiál. Kevlar Kevlar je jiný název pro polyamidová vlákna, která vynikají svou pružností, pevností v tahu a odolností. Kevlar se používá například také při výrobě neprůstřelných vest. Mosaz Slitina mědi a zinku s atraktivním vzhledem. Ocel Nerezová ocel stainless steel. Kvalitní, nekorodující kov, jeho nevýhodou je větší hmotnost. Plast Lehký, křehký, antialergenní materiál. Vhodný pro sportovní použití. Pozlacená ocel Ocel pozlacená vrstvou zlata o tloušťce 510 nm mikronů. Pryž Pryž, nesprávně guma, je velice pružný, voděodolný materiál, proto se používá převážně pro výrobu remínek ke sportovním hodinkám. Silikon Podobně jako u pryže se jedná o pružný, vodoodpudivý materiál, pouze s jiným složením. Textil Jednotlivá textilní vlákna spletená do tkaniny, takzvané textilie, která vyniká především nízkou hmotností a nenáročnou údržbou.

Titan Velmi kvalitní lehký a tvrdý kov, který je vhodný především pro alergiky. Ciferník je tak dobře čitelný i za přímého světla. Minerální sklo Sklo s příměsí křemene. Tvrdost je vyšší, než u akrylátového skla. Plastové sklo Akrylátové sklo, nachází se u všech modelů, není uvedeno jinak. Využívá se především u dětských typu hodinek. Safírové sklo Safírové sklo je syntetický safír, tedy průhledná verze korundu. Jedná se o nejtvrdsí druh skla, který je u hodinek používán. Neznamena to však, že jej nelze poškrábat, pouze je proti oděru a vrypům nejvíce odolné. Sferické sklo Sklo vypouklé do tvaru cocky, která zajišťuje lepší čitelnost ciferníku. Uvádá hlavní použité materiály, bez ohledu na materiálové kombinace Aluminium Chemický značně odolný materiál vynikající svou nízkou hmotností. Titan Velmi kvalitní lehký a tvrdý kov, který je vhodný především pro alergiky. Zkuste Google vyhledávání! Dakujem. Kdybych ho měl, tak to udělám ale na jsem ho hledal zde a nenase. Takový internet podle mě je k ničemu. Jozef Hoza. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon.

It also analyzes reviews to verify trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. First off, the titanium band coupled with the titanium case with stainless steel case backing is an extremely lightweight watch. It also packs a lot of features into such a great value too. This is

my 2nd Pathfinder I have 2 other Pro Trek watches and 2 Suunto watches and like its ProTrek brethren are worth the money. Moving between function is the same across all of the digital models. You use the Mode button to move between the major functions and the corresponding ABC buttons for Altimeter, Barometer and Compass functions. This model also has the moon and tidal information which is great I think since I am on the West Coast and do frequent the beaches regularly. Now if I lived in a landlocked area, then the utility of this watch would probably not be all that great. That aside, the functions all work solidly on this and the other models within the product line. My suggestion is that if your budget affords it, get the ones with atomic timekeeping. Of course, the tough solar feature is great too. First, in order to get an accurate reading with the temperature, you want to ensure that you remove the watch from your wrist. Seemed odd to me at first but after thinking about this subject and reading other reviews, it just make sense. Your own body heat will affect the watches reading because its right against your skin. Ive read in some reviews that people dont think the altimeter is accurate at all either. All 4 models give me the same reading for my house, so I cant believe theyre all incorrect or inaccurate. I also read a review where the person said he wished Casio would make an altimeter function that would work for skiing. Its a solid watch all around and if you find yourself being near the water itll be very very helpful.

May 2012 Update Just came from the UK yesterday and I brought this watch with me. Having changed the home city to London for the duration of my stay there, this watch kept me on time for buses and the subway. All I did each night before going to bed was make sure the watch was near a window and that the 12 hand was point towards the window and I got my update each evening. Regarding the watch band, titanium is meant to be durable, not come through without a scratch. Mine has started scuffing a bit but this is to be expected and should NOT be considered a defect or a drawback. You buy the titanium banded version for its durability and strength, not how well it holds up to scuffing. You wont regret picking it up. First, the titanium band is very scratchable. For some reason it never occurred to me that a titanium watch band would look like a very strong cat got to it after a year of use. Maybe that is the price of the watch being light for its size. Also the paint on the N, W, S, E has worn off a lot. Maybe no paint next time. Neither of these things would bother me so much if it was not a fairly expensive pathfinder watch. I kind of expected it to handle lifes adventures a little better. UPDATE Before the 18 month mark the watch started to fall apart buttons, band. Recommendation If you want a watch that looks good and sporty and you dont mind replacing it in two years or less, yes. If you are actually active or you expect a sporty watch to be tough, no. Please try again later. Eric 5.0 out of 5 stars I can say that this is a solid ABC watch. First off, the titanium band coupled with the titanium case with stainless steal case backing is an extremely lightweight watch. You wont regret picking it up. Please try again later. Please try again later. Peter W. Somers 4.0 out of 5 stars I originally took it to a jeweler. I originally took it to a jeweler who adjusted the band to fit my arm he said those were difficult to do correctly.

The altimeter is variable but based on atmospheric pressure so it will change it is not bad when the weather is consistent. I used it during my hike along the John Muir trail in 2010 and was glad I had it. knowing the altitude helps you pinpoint your location on a map better. I dove the Carribean sea off the coast of Mexico to 65 ft. I have bent the pins on the band several times and taken them to a local jeweler to be replaced. Now the slot holding one of the pins is breaking where it is plastic I am sending it in to be repaired if that is possible. I really like these watches and find the sensors to be reasonable. I use the compass frequently, but necessarily to navigate by mostly just to get a general orientation. I would use a Suunto compass if I had to actually navigate off trail or otherwise. I have had no trouble with the battery or the atomic time updates. My watch looks like it has been through a war zone several times over, but it still works. I just need to get the band repaired so I can wear it. Please try again later. Please try again later. Ivan 4.0 out of 5 stars Pros The watch is very rugged and durable. It is solar powered so there isnt any worry about replacing the battery every two years. Although rather large in size, the watch is not heavy and does not look ridiculous or strange even on

my small wrist. It has a ton of features that work pretty much as advertised and could be very helpful depending on the activity. I have not yet been able to receive a signal to sync with the atomic clock and I have tried everything the manual mentioned. The compass can be accessed only for 15 seconds after which you have to keep pressing the button to access it again. I suspect this is due to battery life issues. Overall I wish I had the option to give it 4.5 stars; however Amazon does not allow it. My 5 reduction is for not being able to sync with the atomic clock, which is a rather important feature of the watch.

Basically, the watch is exactly what it claims to be, no more, no less and I think its fairly priced for everything that it offers, I definitely recommend it. Please try again later. Please try again later. R. Proulx 5.0 out of 5 stars I have used it for three years of serious mountaineering and can attest to the high degree of accuracy of the compass, altimeter, and barometer. For determining altitude, I trust it far more than my Garmin GPS, and only slightly less than my Magellan GPS. As a former member of the U.S.A.F. Air Weather Service, I know quite well the difference between good and bad scientific instruments. On occasion, some function on my older model stopped working either because one of the four alkaline batteries went dead, or due to extremely cold conditions. I have also used the 1500 in extremely hot climates, once measuring a temperature of 52 degrees Celsius. So, neither extreme heat nor extreme cold seems to affect the 1500. At night, I particularly like the auto light function. With a flick of your wrist, the screen lights up without need to press any button. As I do quite a bit of climbing at night, while wearing thick mittens or gloves, this is a huge plus. If you don't like this function, it can be deactivated. As my eyes are now getting worse with age, I am seriously considering stepping up to the newer Casio Protek PRW 2500T7, as it seems from the photos to have a slightly higher contrast screen than the 1500. The only reason I mention this newer model is to show what complete confidence I have in Casio after using the 1500 for so long. I have no doubts whatsoever that the 2500 would be great as well. Please try again later. Please try again later. SkyKnight 4.0 out of 5 stars Battery I think that mine developed some kind of issue with the battery, as it always reads high charge, even when it goes dead. I don't know if this is common, but I am disappointed that there would ever be an issue at this cost.

My solution; leave it in the sun on a window sill for a couple of days every 23 weeks. Compass Pretty accurate, well within the 23 degree advertised accuracy. I love that I can program the declination, as this makes it all that much easier for navigation. Altimeter Even after adjusting the altimeter with known elevations, it still doesn't seem to be very accurate. Barometer I never tested this feature as it just doesn't matter that much to me, but seems to be functional. Atomic updates I have mine set to update at midnight daily, and always had good results. Except in Africa, but I'm pretty sure that Casio is upfront about where it will update, and Africa isn't one of those places. Durability This thing has done two years of tough duty with a US Army parachutist, and still looks new. The titanium is almost definitely the reason why and it is very lightweight too. I would expect it to stand up to just about anyone's lifestyle. Other moon phase display It's not something that I would brag about, as most people can look up and see the moon, but it is accurate. And I live in Colorado where the tide is insignificant. Overall, I'm still pretty happy about this watch and aside from the battery issue am extremely pleased with this watch. Please try again later. Please try again later. jcgoobee 4.0 out of 5 stars At the first glance, this Titanium watch is rather subtle. The touch of the band is nice and smooth. Though it is very light, it doesn't feel cheap. In fact, the balance is just right. Pathfinder and GShock series are infamous of its size, and this one is no exception. The LCD layout is very good. It's informative yet not too busy like the Citizen Skyhawk. All the ABC meterings are right on. I had to reset the altimeter at the sea level but it has been very accurate since. I didn't have to do other calibration for Barometer and Compass at all. The control of the buttons are logically laid out.

However, I suggest the owner to grab a cup of coffee, sit at the quiet area, and spend about 1 hour to read through the entire manual. It's thick and lengthy. But once you understand the logic to set

your watch, its relatively easy. Solar Battery is awesome. I put my watch underneath my desk lamp to be charged at night. I never run into any lowbattery issue at all. Atomic sync is another great feature. I live in Sunnyvale, California. I put my watch by my night stand and it syncs up every night without issue. I dont even have to put it next to the window. Conclusion Great watch in general. There are three things that can be improved 1 User Manual can be better written. 2 The alarm is too soft 3 The illuminator only stays around 3 seconds which is a bit short. If you woke up in the middle of the night, you have to be very alert to read the time that displays only for 3 short seconds. Granted you can press the button to reilluminate it again. Suunto is much more stylish than Pathfinder, but its built quality has been subpar these days. Casio Pathfinder is like a Toyota Camry. Its not stylish in anyway you look at it, but it performs very well and reliable. Hope my two cents help. Please try again later. Please try again later. norske 4.0 out of 5 stars Ill have to see if a local watch guy can fix it maybe the solarrechargeable battery is just shot. Update 20130105 As it turns out, it WAS the battery that was bad. It synced the time overnight so I know its all good. Now I need to check into a battery for the Casio this one replaced Ill bet ITS battery is also shot. I hadnt given a thought that these things even had batteries. Im upping my review from 3 to 4 stars. Theres too many features on the watch that I dont use. I really just need the dual time zone and solar power. Of course, I knew they were included at the time shame on me. Please try again later. Please try again later. WBS 5.
